Education

Princeton University

Expected May 2027

BSE Electrical and Computer Engineering (Minor: Computer Science and Robotics)

Experience

Amazon

May 2026 – August 2026

Software Development Engineer (SDE) Intern, Customer Service

Santa Clara, CA

- Designed and implemented Model Context Protocol (MCP) tools, multi-agent workflows, and agent orchestration infrastructure enabling AI agents to autonomously diagnose customer account issues and provide self-service support.
- Architected GraphQL APIs and schema resolvers that aggregated customer account, payment, entitlement, and membership data from 10+ REST, GraphQL, and internal services into a unified interface for agentic workflows.
- Engineered a service virtualization framework with configurable service mocks and downstream dependencies, enabling parallel feature development, deterministic integration testing, and faster delivery independent of service readiness.

Amazon

June 2025 – August 2025

Software Development Engineer (SDE) APP Intern, Luna Cloud Gaming

Irvine, CA

- Developed a reusable context-aware FAQ content system for the Luna storefront, implementing end-to-end support across backend services (Java), APIs, and client applications to surface contextual help for games and platform features.
- Integrated 5+ Java microservices and client applications (React, Vega, Android View system) to support contextual FAQ routing, localization, and fallback behavior across web, mobile, and smart TV storefront experiences.

QuantCap LLC

December 2024 – January 2025

Machine Learning Intern

Virtual

- Designed and evaluated machine learning pipelines using XGBoost, Random Forests, and Neural Networks to forecast equity option movements, performing feature engineering, hyperparameter tuning, and historical backtesting on financial market data.

TigerApps

May 2023 – January 2024

Student Software Developer

Princeton University

- Designed, implemented, and maintained production features across multiple production web applications (TigerRetail, PrincetonCourses, and other TigerApps services) serving **5.5K+** Princeton University students and faculty daily.

Projects

ADAS Safety Filter for Autonomous Vehicle | (Python, ROS 2, JAX, iLQR, F1TENTH)

April – May 2026

- Engineered a real-time ROS 2 safety filter for a 1/10-scale autonomous vehicle that intercepted human driving commands and prevented lane departures and obstacle collisions using predictive trajectory optimization.
- Implemented a dual-iLQR architecture with independent monitoring and recovery planners, integrating SLAM, obstacle detection, route planning and Ackermann vehicle dynamics into a unified control pipeline validated on physical hardware.

Eval Gaming | (Next.js, React, TypeScript, tRPC, Prisma, PostgreSQL, Clerk, Stripe, Tailwind CSS)

August 2025 – Present

- Designed, implemented, and deployed a full-stack college esports recruiting platform enabling players to build verified profiles, compete in combines, and connect with college coaches at scale.

TigerRetail | (SvelteKit, PocketBase, AWS Lambda, TailwindCSS)

June – November 2023

- Developed a full-stack marketplace platform for the Princeton University community to list, buy, sell, and request items.
- Implemented a strategic tech stack migration from Django+MongoDB to SvelteKit and PocketBase+SQLite, optimizing performance by >20% and reducing infrastructure costs by > 25% for a small but consistent user base.

Fintria | (React, Vite, Firebase, TailwindCSS, Shadcn UI, OpenAI API, RAG, Stripe)

May – September 2025

- Built an AI-powered finance interview preparation platform integrating Retrieval-augmented generation (RAG) to deliver personalized mock interviews, resume reviews, interactive learning modules, and assessments.

KET Academy | (React, SCSS, TailwindCSS, Firebase)

June 2023 – Present

- Developed a learning management platform supporting course delivery, educational resources, and administrative workflows for over 1,000 underserved and internally displaced students in Cameroon.

Leadership / Extracurricular

Princeton University Robotics Club

September 2023 – September 2025

Club Admin, Software Lead

- Led a 10-member RoboCup SSL software team developing machine learning models and system architecture for competitive multi-agent robotic soccer.

Princeton Computer Science Department

September 2024 – Present

Lab TA (Teaching Assistant) for COS217 (Programming Systems) and COS226 (Data Structures and Algorithms)

- Mentored 10+ students during bi-weekly lab sessions by troubleshooting code and guiding them through programming assignments, strengthening their understanding of C, memory management, algorithm design, and core systems concepts - contributing to an 11% average improvement in assignment scores.

Technical Skills

Languages: Python • Java • C/C++ • Go • JS/TS • SQL • MATLAB • PostgreSQL • MySQL

Technologies: CUDA • AWS • NextJS • NestJS • SvelteKit • ExpressJS • Django

Developer Tools: Git/GitHub • Linux • Docker • ROS 2 • Figma • Postman • KiCad • OnShape
